

AQUA IGNIS

THE FIRST COGNAC IN
THE WORLD AGED IN
STEAM-TOASTED BARRELS

Larsen Aqua Ignis comes from a small batch of fine-grain oak casks with a capacity of 225L. Each cask is plunged into hot water then toasted over hot fire, three times. This technique releases the most complex and finest aromas from the wood while keeping out undesired smoky notes, tannins and acidity. Bottled at 42.3%, the result is a unique cognac with intense aromas of roasted mocha and vanilla and a silky finish. This Steam-Fire Process is unprecedented and legally protected. It makes Larsen Aqua Ignis a cognac like no other, outside of the typical cognac categories. It is also what gives it its name: “water” (aqua) and “fire” (ignis) in Latin, or the combination of water and fire, pushed to their limits.

The Adventures of Jens Reidar Larsen

A young Norwegian, who's eager to explore the world, leaves his home shore at the age of 24 on a ship destined for the Americas. But a long stopover in Bordeaux to repair the boat changes his destiny forever. Determined to earn some money before resuming his travels, Jens Reidar quickly finds a job in a small town a little further north, famous for the quality of its eau-de-vie. He meets and subsequently marries a local girl. Thus Cognac becomes his home port. America will have to wait and a new adventure begins. Before long, Jens Reidar discovers yet another passion, one for cognac and the diversity of its soils. He quickly becomes an expert, learns about the well-kept secrets of the cellar masters and explores the treasure of their cognacs. From this experience, the original signature of Larsen Cognac is born in 1926.

AQUA IGNIS

THE FIRST COGNAC IN THE WORLD AGED
IN STEAM-TOASTED BARRELS

Each cask, made of traditional French oak, is plunged into hot water then toasted over hot fire, three times. This innovation is unprecedented and is given the name Steam-Fire Process™. The result is a cognac like no other, with intense aromas of roasted mocha and vanilla and a silky finish.
