

KOSKENKORVA® VODKA

CLIMATE ACTION

VODKA THAT FIGHTS CLIMATE CHANGE

In the village of Koskenkorva, sustainability is a way of life. And it's the home of this single estate vodka that is also the first vodka in the world made entirely from regeneratively farmed barley. Regenerative farming fights climate change by drawing CO₂ from the atmosphere, storing it into the ground, and increasing biodiversity at the same time. If everyone in the world farmed regeneratively, we could potentially remove up to 322 billion tons of CO₂ from the atmosphere. That's 10 times the world's current annual emissions.

KOSKENKORVA'S SUSTAINABILITY GOALS

Our goal is to become the most sustainable vodka in the world. Focusing on more environmentally friendly farming practices and advocating for regenerative agriculture is a crucial part of this journey. After all, agriculture as a whole accounts for a significant share of all global emissions. Koskenkorva Vodka Climate Action is an important milestone on this journey and in bringing regenerative, climate friendly agriculture all the way to store shelves.

Even though Koskenkorva Vodka Climate Action is our flagship product, our efforts are not limited to farming. We are also focusing on reducing the CO₂ footprint of our packaging as well as making our production fully carbon neutral by 2025.
